Head and Neck Codes: Something to hang your hat (or balaclava) on

Moderator: Ann Phelps, Texas Department of State Health Services, Austin, TX

Angela Scheurele, Tesseract Genetics, Dallas, Texas

Codes relevant to the head and neck are found scattered throughout the 6-digit code list. In some instances a single defect may have applicable codes in more than one section. Skin and soft tissue abnormalities of the face and neck are included mostly in the 744 codes. Malformations and deformations of the skull, face bones and vertebrae are coded in the 754 and 756 sections. This talk will review the applications of these codes and some procedural considerations in use of them.
